

TRANSITIONS : ALUMINUM

Taking another step into the forefront of tile design, Puccini is introducing a line of metallic transition pieces. These transitions are more than basic accessories to our tile products. They serve an aesthetic and functional purpose. Available in three styles and three finishes, we have a wide assortment of profiles that can be tailored to suit the needs of each individual project. Depending on one's choice of finish, these pieces can blend into tile designs for a seamless look, or they may be used as a contrasting accent. Whatever the choice may be, these profile pieces can add a cool, contemporary touch to any tile project. These items also serve a functional role in protecting tile edges against chipping. While these transition pieces are being introduced alongside our new thin porcelain tile, they can also work with traditional tile of varying thicknesses. These new products can protect tile at transition points on floors and on wall corners. To maximize and protect the value of newly installed tile, we highly recommend incorporating these items into your next project.
