

## Honeycomb: *Marble*

Humans have always been fascinated by the hexagon shape. Some people believe that it holds mystical powers. The hexagon is a naturally occurring shape, because the inner 120-degree angle can release the most tension. It is no coincident that the home of the honeybee is structured in this geometrically perfect hexagon shape. Puccini 9" Marble Honeycomb Series is inspired by it and hope this product will create a harmonious environment for a home or business establishment.
